CONTROL AND SHUT-OFF VALVES IN SEISMIC VERSION

300 line
acc. to ANSI/ASME

POWER THROUGH IDEAS
www.ldmvalves.com

300 line

CV / SV 320 SP (Ex)
CV / SV 330 SP (Ex)

single-seated,
control (shut-off) valve

CV 322 SP (Ex)
CV 332 SP (Ex)

single-seated,
control valve with
pressure-balanced plug

Control (shut-off) **CV / SV 300 line in seismic version** are designed for regulation and shut-off of process liquid flow, for which seismic resistance of the device is required. The valves meet the conditions of **seismic resistance** in the sense of maintaining mechanical integrity and functionality after a seismic event with a response spectrum of up to 30 m.s^{-2} in all directions, in the band 0 to 33 Hz. Thus, they meet the requirements of **seismic classification 1b of fittings for nuclear energy according to OTT 87/91** and in non-nuclear applications meet the conditions for use in earthquake-prone areas with a maximum intensity of up to 9 degrees of the international scale EMS-98, or MSK-64 (9 bal.).

In **Ex proof version** meet the requirements II 1/2G IIC T6...T1 Ga/Gb acc. to ČSN EN ISO 80079-36 (9/2016) and ČSN EN 1127-1 ed.2(1/2012).

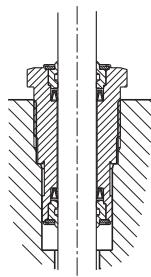

The selected materials correspond to the recommendations acc. to ČSN EN 12516-1 (8/2015). The maximal permissible operating pressures in behaviour with types of material and temperature are specified in the table on page 24 of this catalogue.

Control	hand wheel seismically resistant electromechanical actuators Auma , or other manufacturers
Application	CV / SV 3xx SP - heating, ventilation, power generation and chemical processing industries CV / SV 3xx SPEx - gas and chemical industries
Process media	liquids, gases and vapours without abrasive particles e.g. water, steam, air and other media compatible with material of the valve inner parts To ensure a reliable regulation, the producers recommends to pipe a strainer in front of the valve into pipeline or ensure in any other way that process medium does not contain abrasive particles or impurities
Installation	The valve can be installed in any position except position when the actuator is under the valve body. The valve is to be piped the way so that the direction of medium flow will coincide with the arrows on the body. It is necessary to protect the actuator from excessive heat from the pipeline at medium temperatures above 150 °C (300 °F) , e.g. by appropriately insulating the pipeline and valve and tilting the actuator from the vertical axis. Detailed informations are given in the instruction for installation and service.

Packings

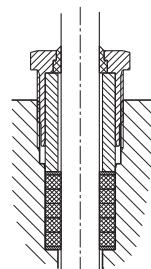

DRSpack® (PTFE)

DRSpack® (Direct Radial Sealing Pack) is a packing with high tightness at both low and high operating pressure values. It is the most used type of packing suitable for temperatures ranging from 0 °C to 260 °C. The pH range is from 0 to 14. The packing enables using of actuators with low linear force. The design enables an easy change of the whole packing. The average service life of DRSpack® is more than 500 000 cycles.

Graphite

This type of packing can be used for media **with temperature up to 550 °C (1020 °F)** and pH range: 0 to 14. Packing can be "sealed up" either by screwing the packing screw in or adding another sealing ring. In regard of intensive frictional forces, graphite packing is suitable for actuators with a sufficient linear force.

Principles for plug type selection

V-ported plugs should not be used in supercritical differential pressures with inlet pressure $p \geq 0,4$ MPa and for regulation of saturated steam. In these cases we recommend to use a perforated plug. The perforated plug should be also used always when cavitation may occur due to a high differential pressure value or valve ports erosion caused by high speed of process medium flow. If the parabolic plug is used (because of small Kvs) for supercritical differential pressures, it is necessary to close both plug and seat with a hard metal overlay, i.e. stellited trim.

Rangeability

Rangeability is the ratio of the biggest value of flow coefficient to the smallest value. In fact it is the ratio (under the same conditions) of highest regulated flow rate value to its lowest value. The lowest or minimal regulated flow rate is always higher than 0.

CV/SV 3x0 SP

Control
and shut-off valves
in seismic version

**NPS 1/2" - 16",
Class 150, 300 and 600**

Technical data

Series	CV / SV 320 (Ex)	CV / SV 330 (Ex)
Type of valve	Two-way, single-seated, control (shut-off) valve	
Nominal size range	NPS 1/2" - 16"	
Nominal pressure	Class 300 and 600 (Class 150, 300 and 600 (weld ended))	
Body material	Cast steel A216 WCB, A217 WC6	
Seat material:	1.4028	1.4571
DIN W.Nr./+ČSN	NPS 3" - 16"	1.4581
Plug material:	1.4021	1.4571
DIN W.Nr./+ČSN	NPS 3" - 16"	1.4581
Stem material	1.4923	1.4980
Operating temperature range	-50 to 550 °C (-58 to 1020 °F) - (the negative temperature requirement must be specified in the order)	
Face to face dimensions	Acc. to ISA-75.08.01-2002 (R2007) for version with flanges Acc. to ISA-75.08.03-2001 (R2007) for weld ends - version Socket Weld Acc. to ISA - 75.08.05-2002 (R2007) for weld ends - version Butt Weld	
Connection flanges	Acc. to ČSN EN 1092-1+A1 (7/2013)	
Flange faces	Type B1 (raised-faced) or Type B2 (plain face) or Type F (female), or Type D (groove) acc. to ČSN EN 1092-1+A1 (7/2013)	
Weld ends	Weld ends acc. to ČSN EN 12627-2 (8/2000)	
Type of plug	V-ported, contoured, perforated	
Flow characteristic	Linear, equal-percentage, LDMspline®, parabolic, on - off	
Kvs value	0.01 to 1600 m³/h	
Leakage rate	Class III. acc. to ČSN-EN 1349 (7/2010) (<0.1% Kvs) for c. valves with metal-metal seat sealing Class IV. acc. to ČSN-EN 1349 (7/2010) (<0.01% Kvs) for shut off valve Class IV. acc. to ČSN EN 1349 (7/2010) (<0.01% Kvs) pro uzavírací ventil	
Leakage rate for Ex version	CV 3xx class IV. acc. to ANSI/FCI 70-2-2013 (< 0.01% Kvs); SV 3xx step C acc. to ISO 5208:2008	
Rangeability r	50 : 1	
Packing	DRSpack® (PTFE) t _{max} = 260 °C (500°F), Expanded graphite t _{max} = 550 °C (1020°F), Bellows (DN15-150) t _{max} = 550°C (1020°F)	
Seismic resistance	0 to 33 Hz, 30 m.s ⁻²	

Cv (Kvs) values and differential pressures Δp_{max} [MPa], [psi] of valves NPS 1/2" - 16" with countoured and V-ported plugs flow direction below plug) with electro-mechanic actuators

Δp_{max} value is the valve max. differential pressure when max open - close function is always guaranteed.

Differential pressure must not exceed 2,0 MPa (290 psi) for valves Class 150 and 5,0 MPa (750 psi) for valves Class 300. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa / 232 psi. Otherwise it is suitable to use perforated plug (Δp up to 4,0 MPa / 580 psi) or sealing surfaces of seat and plug with a hard metal overlay (Δp up to 2,5 MPa / 363 psi).

**Cv (Kvs) values and differential pressures Δp_{max} [MPa], [psi] of valves
NPS 1/2" - 16" with perforated plugs (flow direction above plug)
for electro-mechanical actuators**

Δp_{max} value is the valve max. differential pressure when max open - close function is always guaranteed. Differential pressure must not exceed 2,0 MPa (290 psi) for valves Class 150 and 5,0 MPa (750 psi) for valves Class 300. In regard of service life of seat and plug, it is recommended so that permanent differential pressure of the valves with perforated plug is limited to max. 4,0 MPa / 580 psi.

CV 3x2 SP

Pressure balanced
control and shut-off
valves in seismic version

**NPS 1/2" - 16",
Class 150, 300 and 600**

Technical data

Series	CV 322 (Ex)	CV 332 (Ex)
Type of valve	Two-way, single-seated, control (shut-off) valve with pressure balanced plug	
Nominal size range	NPS 1" - 16"	
Nominal pressure	Class 300 and 600 (Class 150, 300 and 600 (weld ended))	
Body material	Cast steel A216 WCB, A217 WC6	
Seat material: NPS 1/2" - 2"	1.4028	1.4571
DIN W.Nr./+ČSN NPS 3" - 16"	1.4027	1.4581
Plug material: NPS 1/2" - 2"	1.4021	1.4571
DIN W.Nr./+ČSN NPS 3" - 16"	1.4027	1.4581
Stem material	1.4923	1.4980
Operating temperature range	-50 to 550 °C (-58 to 1020 °F) - (the negative temperature requirement must be specified in the order)	
Face to face dimensions	Acc. to ISA-75.08.01-2002 (R2007) for version with flanges Acc. to ISA-75.08.03-2001 (R2007) for weld ends - version Socket Weld Acc. to ISA - 75.08.05-2002 (R2007) for weld ends - version Butt Weld	
Connection flanges	Acc. to ASME B16.5-2013	
Flange faces	RF (Raised Face), RTJ (Ring Joint Face), LFF (Large Female Face), SFF (Small Female Face), LGF (Large Groove Face), SGF (Small Groove Face)	
Weld ends	Butt Weld 1/2" - 16" acc. to ASME B16.25-2012; Socket Weld 1/2" - 2" acc. to ASME B16.11-2011	
Type of plug	V-ported, contoured, perforated	
Flow characteristic	Linear, equal-percentage, LDMspline®, parabolic	
Kvs value	1,6 to 1600 m³ / h (1,85 to 1850 US gallon/min)	
Leakage rate	Class III. acc. to ANSI/FCI 70-2-2013 (<0,1% Cv) for control valves with metal-metal seat sealing Class IV. acc. to ANSI/FCI 70-2-2013 (<0,01% Cv) for control valves with metal-PTFE sealing	
Leakage rate for Ex version	Class IV. acc. to ANSI/FCI 70-2-2013 (<0,01% Cv)	
Rangeability r	50 : 1	
Packing	DRSpack® (PTFE) $t_{max} = 260\text{ }^{\circ}\text{C}$ (500°F), Expanded graphite $t_{max} = 550\text{ }^{\circ}\text{C}$ (1020°F), Bellows (DN15-150) $t_{max} = 550\text{ }^{\circ}\text{C}$ (1020°F)	
Seismic resistance	0 to 33 Hz, 30 m.s⁻²	

Cv (Kvs) values and differential pressures Δp_{max} [MPa], [psi] of pressure balanced valves NPS 1" - 16" with electro-mechanic actuators

Δp_{max} value is the valve max. differential pressure when max open - close function is always guaranteed.

Differential pressure must not exceed 2,0 MPa (290 psi) for valves Class 150 and 5,0 MPa (750 psi) for valves Class 300. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa / 232 psi. Otherwise it is suitable to use perforated plug (Δp up to 4,0 MPa / 580 psi) or sealing surfaces of seat and plug with a hard metal overlay (Δp up to 2,5 MPa / 363 psi).

For further information on actuating, see actuators' catalogue sheets			Actuating (actuating)					Auma		Auma		Auma		Hand wheel

¹⁾ -29°C to 38°C

²⁾ Normalized annealed material only. The deliberate addition of any element which is not listed in ASTM A 217 is inadmissible, with the exception of Ca and Mg for deoxidation.

³⁾ With a temperature above 540°C (1004°F) use only when the carbon content is ≥ 0,04%.

Maximal permissible operating pressures according to ASME B16.34-2013 [psig]
